

Samir Shrestha

Backend Developer

• Kathmandu, Nepal • 9869152627 • samirstha9087@gmail.com • github.com/samiir-shrestha

I am Samir Shrestha, a final-year BSc.CSIT student with hands-on experience building full-stack and backend-focused web applications using Node.js, FastAPI, React, and SQL databases. Passionate about backend architecture, REST API design, and writing clean, testable server-side code. Comfortable working independently and in teams on end-to-end project delivery.

EDUCATION

Madan Bhandari Memorial College

BSc.CSIT — Bachelor of Science in Computer Science & Information Technology (Tribhuvan University)

2023 – Present

PROJECTS

Smart Fertilizer Recommendation System

- Designed and built a full-stack web app that recommends fertilizers using a trained machine learning model.
- Developed the backend with FastAPI and PostgreSQL, deployed on Render, exposing a RESTful API layer.
- Built the frontend with React, deployed on Vercel, including a location picker using OpenStreetMap.
- Integrated a Random Forest classifier for fertilizer recommendations.
- Implemented JWT-based authentication, rain-delay alerts, and automated PDF report generation.

Live: <https://final-front-sandy.vercel.app/>

Book Rental System

- Built a complete book rental web app, handling frontend and backend independently.
- Developed a dynamic, responsive UI using React.js with reusable component-based architecture.
- Built server-side logic with PHP for user authentication and data operations.
- Implemented full CRUD functionality: browse, rent, return, and manage books.
- Managed relational data with MySQL for book inventory, user records and rental history.

GitHub: github.com/samiir-shrestha/book-rental

Food Finder

- Built a full-stack restaurant discovery and wishlist app using Next.js and TypeScript.
- Designed a reusable, component-based React UI including dynamic listing, detail, and wishlist pages.
- Developed a RESTful API layer in Next.js for browsing restaurants and managing user wishlists.
- Implemented GitHub OAuth authentication via NextAuth.js, with session-based route protection for user-specific actions.
- Managed relational data in MySQL for restaurant listings and user wishlist records, containerized with Docker for local development.

SKILLS

Backend: Node.js, Express.js, FastAPI, Next.js, RESTful API Design

Languages: Java, Python, JavaScript, TypeScript

Databases: PostgreSQL, MySQL

DevOps & Tools: Docker, Git/GitHub

Frontend: React.js, HTML5, CSS3

Concepts: Full Stack Development, MVC Pattern, RESTful Architecture, Component Design

Soft Skills: Problem Solving, Teamwork, Effective Communication, Time Management

LANGUAGES

Nepali, English, Hindi
